

FUN IN THE SUN

Not so fast! Keep it in the shade for 48 hours post-wax to avoid any unwelcome surprises like hyperpigmentation or sun damage. Don't forget sunscreen. You're welcome!

PROTECT THOSE PORES

Think twice before diving into that pool, lake, or ocean. Your hair follicles are in a delicate state, and those bacteria are not invited to the party!

WHAT NOT TO WEAR

Post-wax, let your skin chill out and breathe, babe. Slip into something a little more comfy to avoid any unwanted rub-a-dub-dub on your freshly waxed skin.

FRESHLY WAXED? WAXING AFTERCARE DO'S & DON'T

BREAKING A SWEAT?

Hit pause on those burpees and squats. It can lead to some seriously uncool skin irritation and even infection. So, cool it for a couple of days, okay? It's all about that self-care life.

STAY SEX FREE

After a wax in those oh-so-precious places, keeping the sexy time on hold for a bit is a must-do, darling. That post-wax friction? It's a one-way ticket to Bumpsville, Ingrown town and Infection City. Keep it cool, let things breathe, and your skin will thank you.

MOISTURIZE & EXFOLITE

Pause on the scrubbing, for now at least. Your skin deserves some downtime after waxing at least 36 hours. Remember to generously apply some love and moisture. Believe me, your skin will be grateful!
